

(v) each of the blades having an axis, the blades being oriented so that the blade axes are substantially parallel and the axes form an angle of about 1° to about 89° relative to the sheet;

(vi) each one of the plurality of blades defines essentially a plane and wherein the anchor comprises a portion of the plurality of blades being oriented at an angle of about 90° with respect to a remaining portion of the plurality of blades; and

(vii) each one of the plurality of blades defines essentially a plane and wherein the anchor comprises a portion of the plurality of blades being oriented at an angle within a range of about 1° to about 89° with respect to a remaining portion of the plurality of blades.

25. (Amended) The device of Claim 24, wherein the anchor is selected from the group consisting:

- (i) a projection extending out from at least one blade;
- (ii) a barb on a blade;
- (iii) at least one opening extending through at least one blade;
- (iv) an adhesive on a body contacting surface of the sheet [and on at least one of the plurality of blades];
- (v) a portion of the plurality of blades being oriented at an angle of about 90° with respect to a remaining portion of the plurality of blades; and
- (vi) each one of the plurality of blades defines essentially a plane and wherein the anchor comprises a portion of the plurality of blades being oriented at an angle within a range of about 1° to about 89° with respect to a remaining portion of the plurality of blades.

Kindly add the following new claims:

Sub B3
A3
-53 (New). The device of claim 2, wherein the anchor is the adhesive on the the body contacting surface of the sheet, the adhesive further being on at least one surface of a least one of the plurality of blades.
